The Ultimate Pregnancy *Diet Plan*

Including 5 Must Eat Foods PLUS 5 Foods To Avoid To Keep Your Tiny Bub Safe!

Welcome

to my delicious and nutritious 7-day meal plan for expectant mothers!

As a registered dietitian who specialises in prenatal nutrition, I've had the pleasure of helping countless mums-to-be navigate their diets before, during, and after pregnancy.

I know firsthand how challenging it can be to maintain a healthy diet while dealing with morning sickness, food aversions, and cravings that seem to come out of nowhere.

But fear not, because with my meal plan, you'll have plenty of tasty and satisfying options to keep you and your growing baby nourished and energised. So put on your favorite maternity leggings, grab a fork, and let's dig in!

Foods to Avoid During Pregnancy:

Before we begin, let's talk about which foods you should avoid to keep your tiny bubba safe...

While pregnant, your immune system will be weakened, making you more susceptible to foodborne illnesses such as Listeriosis, Salmonellosis, and Toxoplasmosis.

These illnesses can lead to serious health problems, such as miscarriage, stillbirth, premature birth, and other complications.

Therefore, it is imperative to avoid certain foods that have a higher risk of containing harmful bacteria or parasites. Raw or Undercooked Meat, Poultry, and Fish - These foods can contain harmful bacteria that can cause foodborne illnesses, such as listeria or salmonella.

1. **Unpasteurised Dairy Products** - Unpasteurised dairy products can contain harmful bacteria, such as listeria, that can cause foodborne illnesses.
2. **Raw or Undercooked Eggs** - Raw or undercooked eggs can contain salmonella, which can cause foodborne illnesses.
3. **Processed and Deli Meats** - These meats can be contaminated with listeria, which can cause foodborne illnesses.
4. **Certain Seafood** - Some types of seafood, such as shark, swordfish, king mackerel, and tilefish, can contain high levels of mercury, which can be harmful to the baby's developing nervous system.

Foods to Eat During Pregnancy:

Now, I think that's enough talking about what you shouldn't consume during pregnancy,... now let's talk about what you should aim to include.

Pregnancy increases the body's demand for nutrients such as folic acid, iron, calcium, and protein, which are essential for healthy fetal development.

Eating a balanced and nutrient rich diet can help reduce your risk of having pregnancy complications such as gestational diabetes, macrosomia, emergency caesarean section, low birth weight, stillbirth, miscarriage and early onset labour.

Eating a variety of healthy foods during pregnancy can also help establish good eating habits that can benefit both yourself, and your baby, in the long term.

1. **Dark Leafy Greens** - Dark leafy greens, such as spinach and kale, are rich in folate, a B vitamin that helps form baby's neural tube and prevents major birth defects of their brain and spine.
2. **Lean Protein Sources** - Lean protein sources, such as chicken, turkey, fish, and legumes, are important in growing and repairing baby's new tissues, and making important hormones, enzymes and antibodies for their immune system.
3. **Whole Grains** - Whole grains, such as whole wheat bread, steel cut oats, brown rice, and quinoa, are rich in fiber, B6, and folate and can help prevent constipation during pregnancy, and reduce your risk of getting gestational diabetes
4. **Dairy Products** - Dairy products, such as milk, cheese, and yogurt, are rich in calcium, which is important for baby's bone and nervous system development.
5. **Berries** - Berries, such as strawberries, blueberries, and raspberries, are rich in antioxidants and vitamin C, which can help support both yours and baby's immune system.

Quick Tips to Follow During Pregnancy:

Remember, it's not only about what you eat and don't eat during pregnancy. Here are some important tips to keep your feeling your best during your pregnancy journey:

1. Eat small, frequent meals throughout the day to help prevent nausea, dizziness and heartburn.
2. Stay hydrated by drinking plenty of fluids, such as water, milk, and nourishing smoothies.
3. Avoid foods and drinks that are high in sugar, salt, and saturated fat.
4. Take a prenatal vitamin to ensure adequate intake of essential nutrients, such as folic acid, iron, and calcium.
5. Talk to your dietitian about any dietary restrictions or concerns you may have.

7-Day Meal Plan for Pregnant Women:

To help make things as simple as possible, I've put together an example 7-day meal plan that will steer you clear of those foods to avoid and maximise all the goodness of the foods you want to prioritise!
